

NexusOne-managed Cloudera-as-a-Service

Nexus Cognitive specializes in helping organizations accelerate their data maturity journey through NexusOne – managed Cloudera-as-a-Service. The platform is the “easy button” for customers who want the power of Cloudera but don’t want to retain expensive technical resources. NexusOne provides significant opportunities to lower the client’s cost of implementation, security, operations, and support by 50% to 90% compared to “going it alone.” It is the clear choice for companies that need to manage enterprise workloads. We offer comprehensive tech-enabled managed services designed to take the burden off your shoulders. NexusOne addresses security concerns with an extensive SOC2 Type2 PaaS security envelope vetted by major financial institutions.

Challenge

Many companies struggle to develop a standard pattern to effectively implement, orchestrate, and operate enterprise data projects due to technical debt, lack of standardization or complexity. Studies suggest that over 50% of enterprise data projects do not provide the intended Return on Investment (ROI).

Solution

NexusOne provides all the tools needed to rapidly overcome the challenges associated with managing enterprise data. As a comprehensive managed Cloudera-as-a-Service solution, NexusOne transforms the way organizations handle their data, ensuring a streamlined and effective approach to implementation, orchestration, and operation.

Benefits

- Cost Take Out
- Speed to Value
- Security SOC2 Type 2
- Enterprise Pricing
- Operations and Support
- Industry Knowledge

NexusOne–We Operate so you can Innovate

NexusOne Core serves as a foundation that unifies, scales, and optimizes data operations.

Cost Take Out

NexusOne provides significant opportunities to lower the client’s cost of implementation, security, operations, and support by 50% to 90% compared to “going it alone.”

Speed to Value

Establish an enterprise data lake in days, populate data in weeks, and gain valuable insights in 4 to 6 weeks.

Enterprise Security SOC2 Type 2

All data is shielded within an air-gapped security envelope in the cloud of your choice using a security depth philosophy.

Enterprise Pricing

Bundle project implementation fees, cloud infrastructure, security, CDP license, and operations costs into a low monthly fee.

Operations and Support

Take advantage of our 24x7 “white glove” support for all systems under our management and security umbrella.

Industry Knowledge

Leverage significant domain knowledge across various industries from our experienced staff.

NexusOne—Answers at Scale

NexusOne is a managed Cloudera-as-a-Service platform for companies that want to focus on their core business by outsourcing the administration, support, and security of managing complex big data environments. The platform takes a holistic approach to infrastructure by addressing cloud support, data, managed infrastructure, and enterprise services under a unified control plane and security umbrella. The goal of NexusOne is cost-effective management of complexity to discover something you don't know about your business.

NexusOne is a turnkey solution to outsource operations and support, enabling answers at scale.

Management and Security Umbrella

NexusOne Control Plane—Enterprise Automation
SOC2—Service Organization Control: Type 2

Simplicity and Standardization lead to Natural Cost Containment

As the complexity of the modern enterprise data environment explodes, companies find themselves looking for ways to simplify and secure their operations to focus on their core business. NexusOne is designed to be a safe harbor by providing a management and security shield over the enterprise data assets that drive innovation.

Enterprise Pricing

Nexus offers customers the ability to outsource as little or as much as they want. Some customers only leverage NexusOne Core while managing data pipelines and advanced analytics in-house. Others entrust Nexus with their entire data infrastructure, including the core, data pipelines, applications, and IT management. Nexus welcomes any of these scenarios along with creative approaches to amortize all project costs, including implementation, into one low monthly payment.
